

Endurica's Proven Process

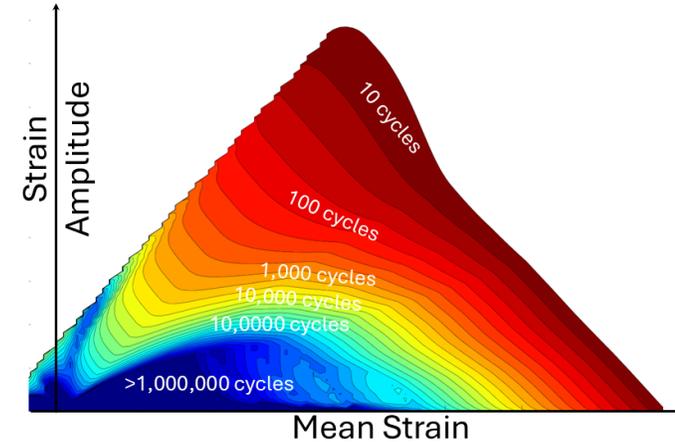

The world's best-validated fatigue life simulation system for elastomers

Simulation Software
Material Characterization
Testing Instruments
CAE Services
Training

Adopted by **leading global manufacturers**
Award-winning tools
with the **strongest validation** cases in the industry

In the automotive industry design to launch is becoming more of a time crunch. This is what Endurica software does ... it allows us to cut that time down and allows our customer base to do their job and **not worry if they have a durability problem.**

Steve Pohlman
Vice President and General Manager of Global Elastomers Tenneco Inc.

Before Endurica, we went through 40+ design iterations and 4 or 5 rounds of physical testing... Since we adopted Endurica CL, we have been able to compare the fatigue life for new designs against previous designs... This has meant that we can produce a suitable design **with only a handful of design iterations and a single physical test.**

Liam Turbet
Technical Manager Delkor Rail Pty LTD

Our customers have many unique and complex applications, so **our ability to quickly propose the right solution** – and achieve successful results early on is important... Their timely and precise guidance has supported us in effectively implementing the necessary workflows.

Ander Aldalur
Applications Engineer Aplicaciones Mecánicas del Caucho (AMC)
